

# Pegasus Add-On Functionality

Despite the breadth of intuitive functionality Pegasus solutions offer, no 'off the shelf' financial and business solution will fit your business requirements exactly.

This is why Technology Management has a team of developers to make additions and modifications to allow more bespoke features to be added, according to your individual requirements.

This can include anything from fields and form design, right through to full systems that sit within your Pegasus solution and have the same look and feel, with all the updating and validation of data built in as standard.

Customisation allows the functionality of Pegasus solutions to extend into all areas, with over half of our customers choosing to have some sort of customisation to their system in order to gain extra functionality or provide enhanced information about their business.

## Five of our most successful modules include:

### **Time and Attendance (T&A)**

Entering hours, overtime and other details for weekly payrolls is time consuming for many businesses. Technology Management's T&A Link allows employee payment and deduction values to be automatically updated from an external data source, such as .CSV files.

The facility is provided to view, modify and report on the imported data before updating the Payroll. The on-screen forms and reports have been written to exhibit the same appearance, look & feel to the standard Opera II system.

It is possible to import data from more than one data source (e.g. hours from a T&A system and expenses from a spreadsheet).

### **Data Import and Export Routines**

Save time by quickly moving data to and from Pegasus Opera II into third party systems, using Technology Management's Import and Export Routine tools. For example, Technology Management has developed links so that users can export payroll data into Microsoft Dynamics NAV's nominal ledger.

### **Certificate of Conformity**

Easily manage the day-to-day task of creating, tracking and supplying certificates of conformity with Technology Management's Certificate of Conformity enhancement for Pegasus Opera II.

Designed so you never forget to include the certificate of conformity with deliveries, the enhancement will assign the certificate of conformity to the correct delivery note and print out the customised certificate in readiness for the delivery.

#### **TM Transport System**

The TM Transport System has been designed to enhance the functionality of the Sales Order Processing (SOP) module of Pegasus Opera II; offering functionality to define delivery vehicles and loads, assign sales orders to loads, and manage load capacities by weight and volume. Reports are provided for product requirement to fulfil pending loads, vehicle availability, manifests and overloads.

#### **TM Stock Take**

This application can be used to quickly update stock levels as part of the stock take procedures. Stock figures are entered and an adjustment is posted to the stock database.

#### **CopyCompany**

CopyCompany enables you to easily copy your data into separate company databases within your Pegasus Opera II system for archiving information or testing processes without impacting your live company data.

Developed by Technology Management, a leading Pegasus Strategic Partner, CopyCompany is an easy-to-use yet powerful enhancement that enabling you to:

- Copy one company to another
- Safeguard against copying over an existing company
- Change links to the nominal ledger from other ledgers to safeguard against transferring into incorrect ledgers
- Copy over PDF archived documents, such as invoices and spool files
- Copy over all the Document Management files

Copy Company is fully compatible with all Pegasus Opera II modules and is ideal for keeping a backup of Payroll data at Year End or for Archive/Online Filing purposes.

Please note that any bespoke work requires that the Opera II toolkit module be purchased and activated prior to installation
