- ◼ Core functionality of Microsoft Dynamics NAV
- ◼ Extended functionality for the Food & Beverage industry

Integrated software for the Cheese & Dairy Industry

Dynamics Food from Technology Management provides a complete end-to-end business software solution for Cheese & Dairy Processors and Distributors. It combines the core ERP functionality of Microsoft Dynamics NAV (manufacturing, finance & distribution) with SI Foodware - a suite of software modules designed specifically for the food industry.

Dynamics Food works with, and like, the software your people are already familiar with; Microsoft Office® and Outlook®, meaning it's quick to learn and easy to use.

KEY FUNCTIONALITY FOR CHEESE & DAIRY PROCESSORS AND DISTRIBUTORS

Full traceability back to the farm
Dynamics Food provides full traceability from the farm to tanker, silo, product tank/individual vats/filling lines to the finished product, inventory and customer dispatches. Within minutes you can identify all raw material batches and equipment used to manufacture your finished products - for your own traceability or in response to customer audits or product recalls.

Integrated quality control and product specifications
Dynamics Food's integrated quality control enables the scheduling of product tests (and their results recorded and actioned as necessary) quickly and easily at any stage - from the inbound arrival of raw ingredients, throughout the production process or even at pick/ship/despatch. Customer specific product specifications (ingredients and nutrition analysis) are automatically produced along with Certifications of Analysis (COAs).

Grading
To meet the myriad of quality requirements of different customers, Dynamics Food enables you to record the grade of different batches of dairy produce - such as cheese, milk and yoghurt. This ensures individual customer quality standards are met and provides stock availability for sales and despatch.

Fixed/variable catch weight
From goods receipt, consumption, shrinkage/wastage through to shipping, catch weight tracking can be set to capture weight at various stages and intervals within your business process - with or without the use of integrated scales.

Pro-active call scheduling linked to journey planning
For short-shelf life products such as most dairy products, outbound calling - linked to delivery planning and stock availability/visibility - to independent retailers, pubs and restaurants is key to driving sales and maximising efficiency.

Integrated multi-channel trading options
However you trade with your customers, Dynamics Food provides integrated multi-channel trading via Electronic Data Interchange (EDI), hand-held mobile devices/iPads, van sales, fax, email and/or online. We already support customers trading via EDI with a number of partners including, Asda, Booker, Co-operative Group, Costco, Iceland Morrisons, Ocado, Sainsbury's, Tesco and Waitrose.
