SystemGuardian: proactive 24/7 system monitoring

Daily monitoring of:

- ✓ Any Windows service error
- ✓ Backup status - Success or Failure
- ✓ Current anti-virus patches
- ✓ Performance loads on CPUs, memory, disk and network I/O
- ✓ Disk space thresholds
- ✓ Network connectivity PING tests on printers, routers, remote
- ✓ TCP port checks on your client's server, any external servers and ISP services
- ✓ RAID health checks
- ✓ SNMP checks to monitor any SNMP-enabled device.

SystemGuardian from Technology Management offers your business proactive 24/7 system monitoring, checking for any issues that, if left untreated, could cause system downtime.

Each day SystemGuardian monitors your server and networks. Automated system health checks alert our engineers to any emerging problems, enabling them to deal with issues sooner, before they become serious and costly to fix.

You can choose from daily, weekly and monthly reporting to stay on top of how your system is performing, with news on any preventative measures our engineers are making to keep your systems running smoothly.
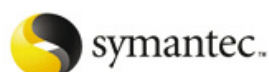

SystemGuardian starts from £39 per month, plus £16 for each additional server. For our engineers to be able to respond to SystemGuardian alerts you will also require a TecSupport contract.

For a demonstration and to discuss your data backup strategy, contact Technology Management:
