How we can help your business get ready for Christmas 2019

You can’t predict what Xmas actually holds in store for your business, but you can certainly prepare for it. In this respect, Technology Management can assist with Dynamics Food, a product designed specifically for food suppliers, as it enables you to maintain a live status of orders and stock. It also integrates floor data capture and EDI messaging to ensure your operations run smoothly.

You struggle to run a successful Christmas promotion

Dynamics Food combines the power of Dynamics NAV (now Dynamics 365 Business Central) and Dynamics 365 Business Finance, which can help turn your investment in the Christmas season into a profit generator.

1. You’re sat there manually keying EDI orders

Integrated EDI transactions processed by customers of Technology Management

If you’re already wasting time on data entry, you’ll only waste more, and probably less accurately, if you continue to do so. Why not invest in the right technology, like Dynamics Food, to automatically import your EDI orders for you and pass them straight to your warehouse or 3PL for picking & despatch.

2. You’re having to get rid of your excess stock to the discount houses

Dynamics NAV is an end-to-end solution that streamlines your accounts receivable processes and tracking of customer payments. This will only help drive your cash flow management.

3. You have no faith in investing because you can’t manage your cash flow

Dynamics Food is integrated with the Financial Services Bureau and contains functionality to help your business manage its cash flow.

4. You need to hire an army of temporary staff to deal with the demand

Integrated bar code scanning, shopfloor data capture and EDI messaging can help turn your investment in the Christmas season into a profit generator.

5. You simply wouldn’t have been able to cope with the sheer volume at Christmas without Dynamics Food

Major cheese supplier
