CRM & Power Platform 3rd
Party Add-ons

Hi!

Ben & Jordan

What are 3rd Party Tools and why do we use them?

- The core product doesn't have the functionality built in.
- The functionality in the core product is poor.
- A 3rd Party addon offers a better and more put together experience.
- Building the functionality in house is not cost affective or no one in the business has the technical skills.
- Using a verified 3rd party tool (on App store) is controlled, supported, updated and managed.

3rd Party Addon can assist with the following.

- Built in templates are restricted to what we need (MSCRM Addons –Documents Core Pack)
- Storage keeps on increasing with no way to stop it (MSCRM Addons – Email Extractor)
- Capturing Signatures for important documents (DocuSign)
- Extended data visualisation of delivery routes, territories and assets in a map view. (Maplytics).
- Manual Data entry just isn't enough (Validating Data – Data 8)

MSCRM Addons - Documents Core Pack

www.mscrm-addons.com

Dynamics CRM Templates

- Included as part of Core CRM.
- The ability to create Microsoft Word, Excel and PDF Templates for OOTB and Custom Tables
- The ability to standardize company communication and branding
- Staff save time in sending dynamic information to customers
- Examples of common use
 - **Company Terms and Conditions**
 - **Contract Agreements**
 - **Quotes**
 - **Terms of service**
 - **Mail Merge**
 - **Excel Sales Figures**
- The ability to have personal or organisational templates
 - Organisation Templates - Centrally managed
 - Personal Templates – Created, managed and shared by users

Disadvantages of OOTB Templates

- Organisational templates cannot be tied down to specific staff members.
- Unable to dynamically select a template based on CRM record information.
- What you add to the template appears regardless.
- Only surfaces data from CRM
- Multiple templates are required for different information.
- Unable to link dynamic images. Example might be a picture of the product on quote.
- Word Designer - Can be clunky at times.
- A requirement to keep the templates saved outside CRM if they need to be updated at a later date.
- Only supports access to data one relationship deep.
- No dynamic logic to hide/show fields based on CRM data.

Advantages of MSCRM Addon Documents Core Pack

- Templates are centrally managed outside CRM.
- **Ability to use logic to hide or show fields based on CRM data**
- **Ability to dynamically insert images based on CRM data**
- **Can access and display information/images from multiple locations (outside of CRM)**
- **Ability to link directly with DocuSign or other E signature software.**
- Apply security around what templates users can access.
- Export to Word , Excel or PDF
- Save directly to SharePoint. (automation – workflows)
- Supports the ability to display information more than one layer down the relationship.
- **Supports Quick run templates**
- **Supported by MSCRM Addons as part of the subscription**
- **New updates and features added with each version.**

Documents Core Pack Demo

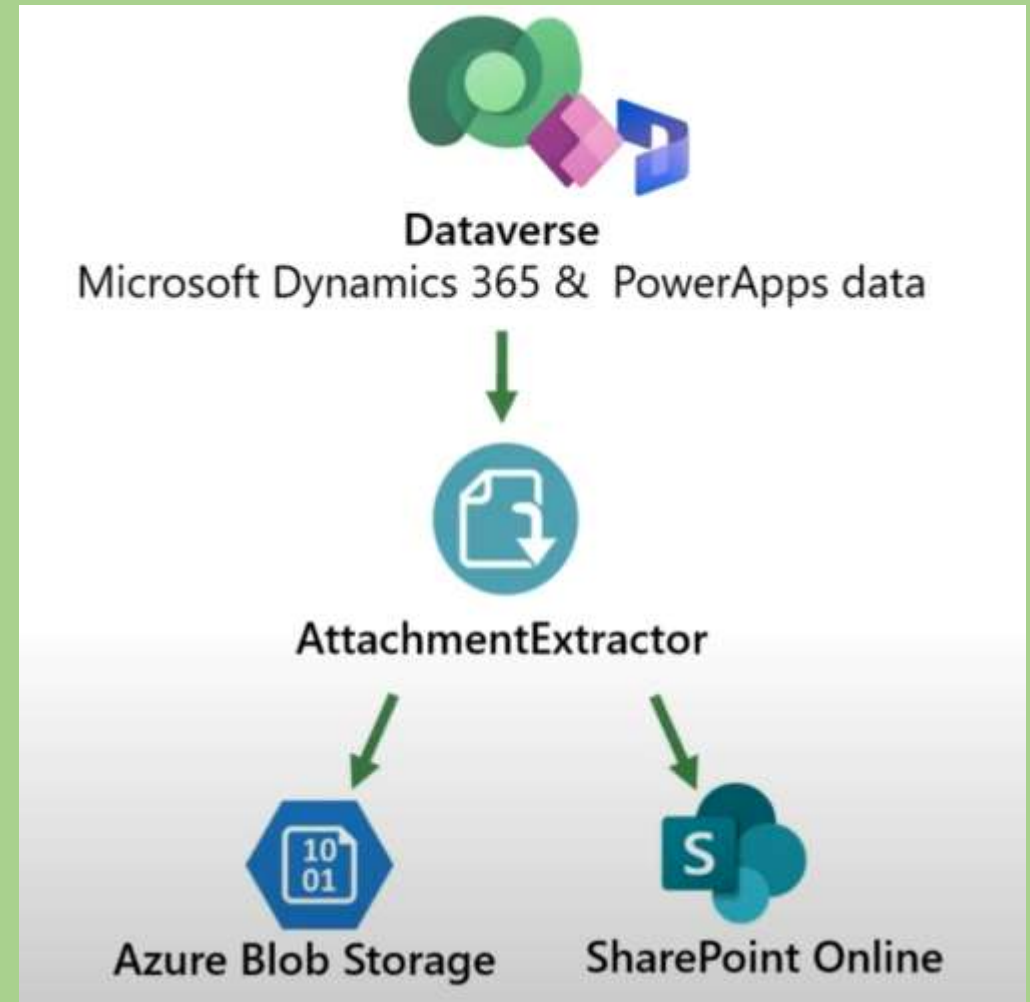

MSCRM Addons - Email Extractor

www.mscrm-addons.com

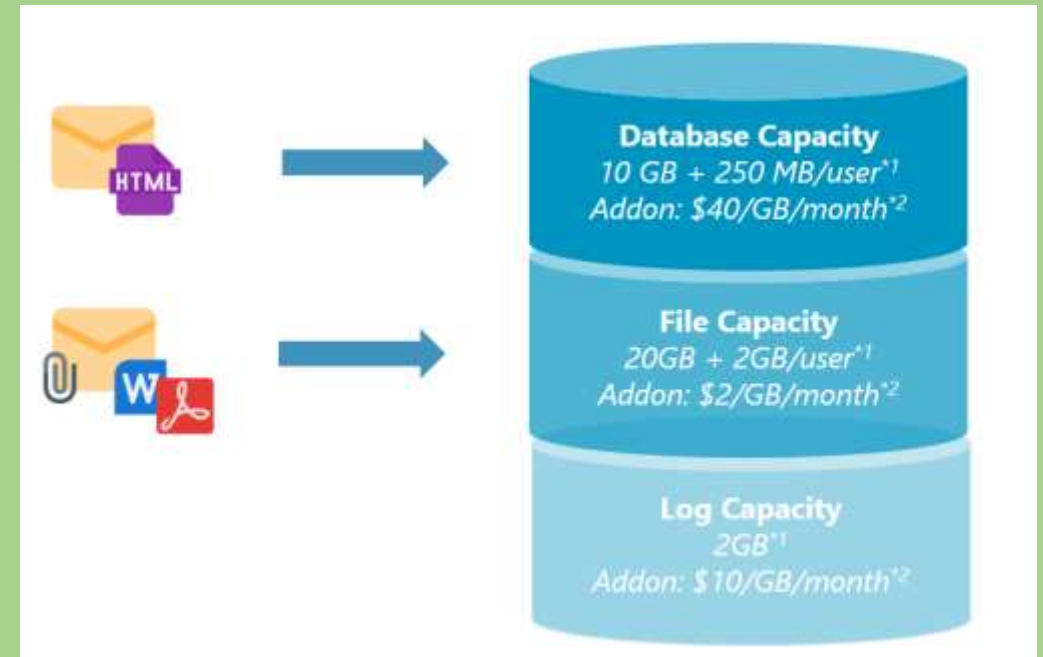

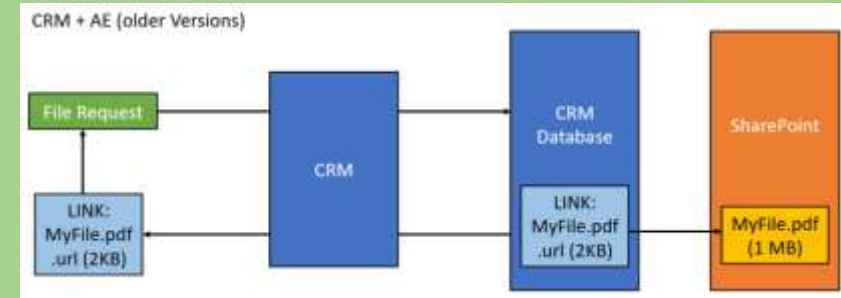

Why use MSCRM Addons Email Extractor

- Moving data to Azure Blob storage/SharePoint greatly reduces Dataverse storage capacity.
- Offloads Images in emails and attachments (email, notes, task) to SharePoint
- Run of demand or on a schedule. (Don't run it in the middle of the day 😊)
- Unchanged user experience for data that has been moved. (emails still appear on the timeline in plaintext)
- Data moved to blob storage is downloaded on demand (when the email is opened).
- Email extractor service can be self hosted or managed by MSCRM Addons

Why use MSCRM Addons Email Extractor

- Apply filters to what data you want to move based on attachment size or age of the email
- [Cost Saving Calculator](#) on the website.
- Video overview of the [Email Extractor Tool](#)

DocuSign (Electronic Signatures)

www.docusign.com

Why use docuSign™

- OOTB Dynamics CRM has no inbuilt solution for capturing electronic signatures.
- Verified App on App Source & Supported by DocuSign.
- Subscription based licence (dependant on number of signed envelopes) in Tiers
- Native integration with Dynamics CRM and can be used for any scenario where a signature is required.
 - NDA
 - Service Contract
 - Sales Agreement
 - Certification
 - Quotes
- Templated Documents can be sent directly from CRM and are automatically captured in SharePoint when signed.
- Can be used with other 3rd Party tools such as Document Core Pack or Smart flow (Experlogix)

DocuSign Demonstration

Maplytics
www.maplytics.com

Why use maplytics.

- Direct integration with Dynamics CRM
- Enhance the use of tracking accounts/activities/custom tables.
- Allows visualisation of CRM data in a Map view.
- Subscription based (Tiered based on No of Users)
- Uses Azure Maps API or Google Maps API

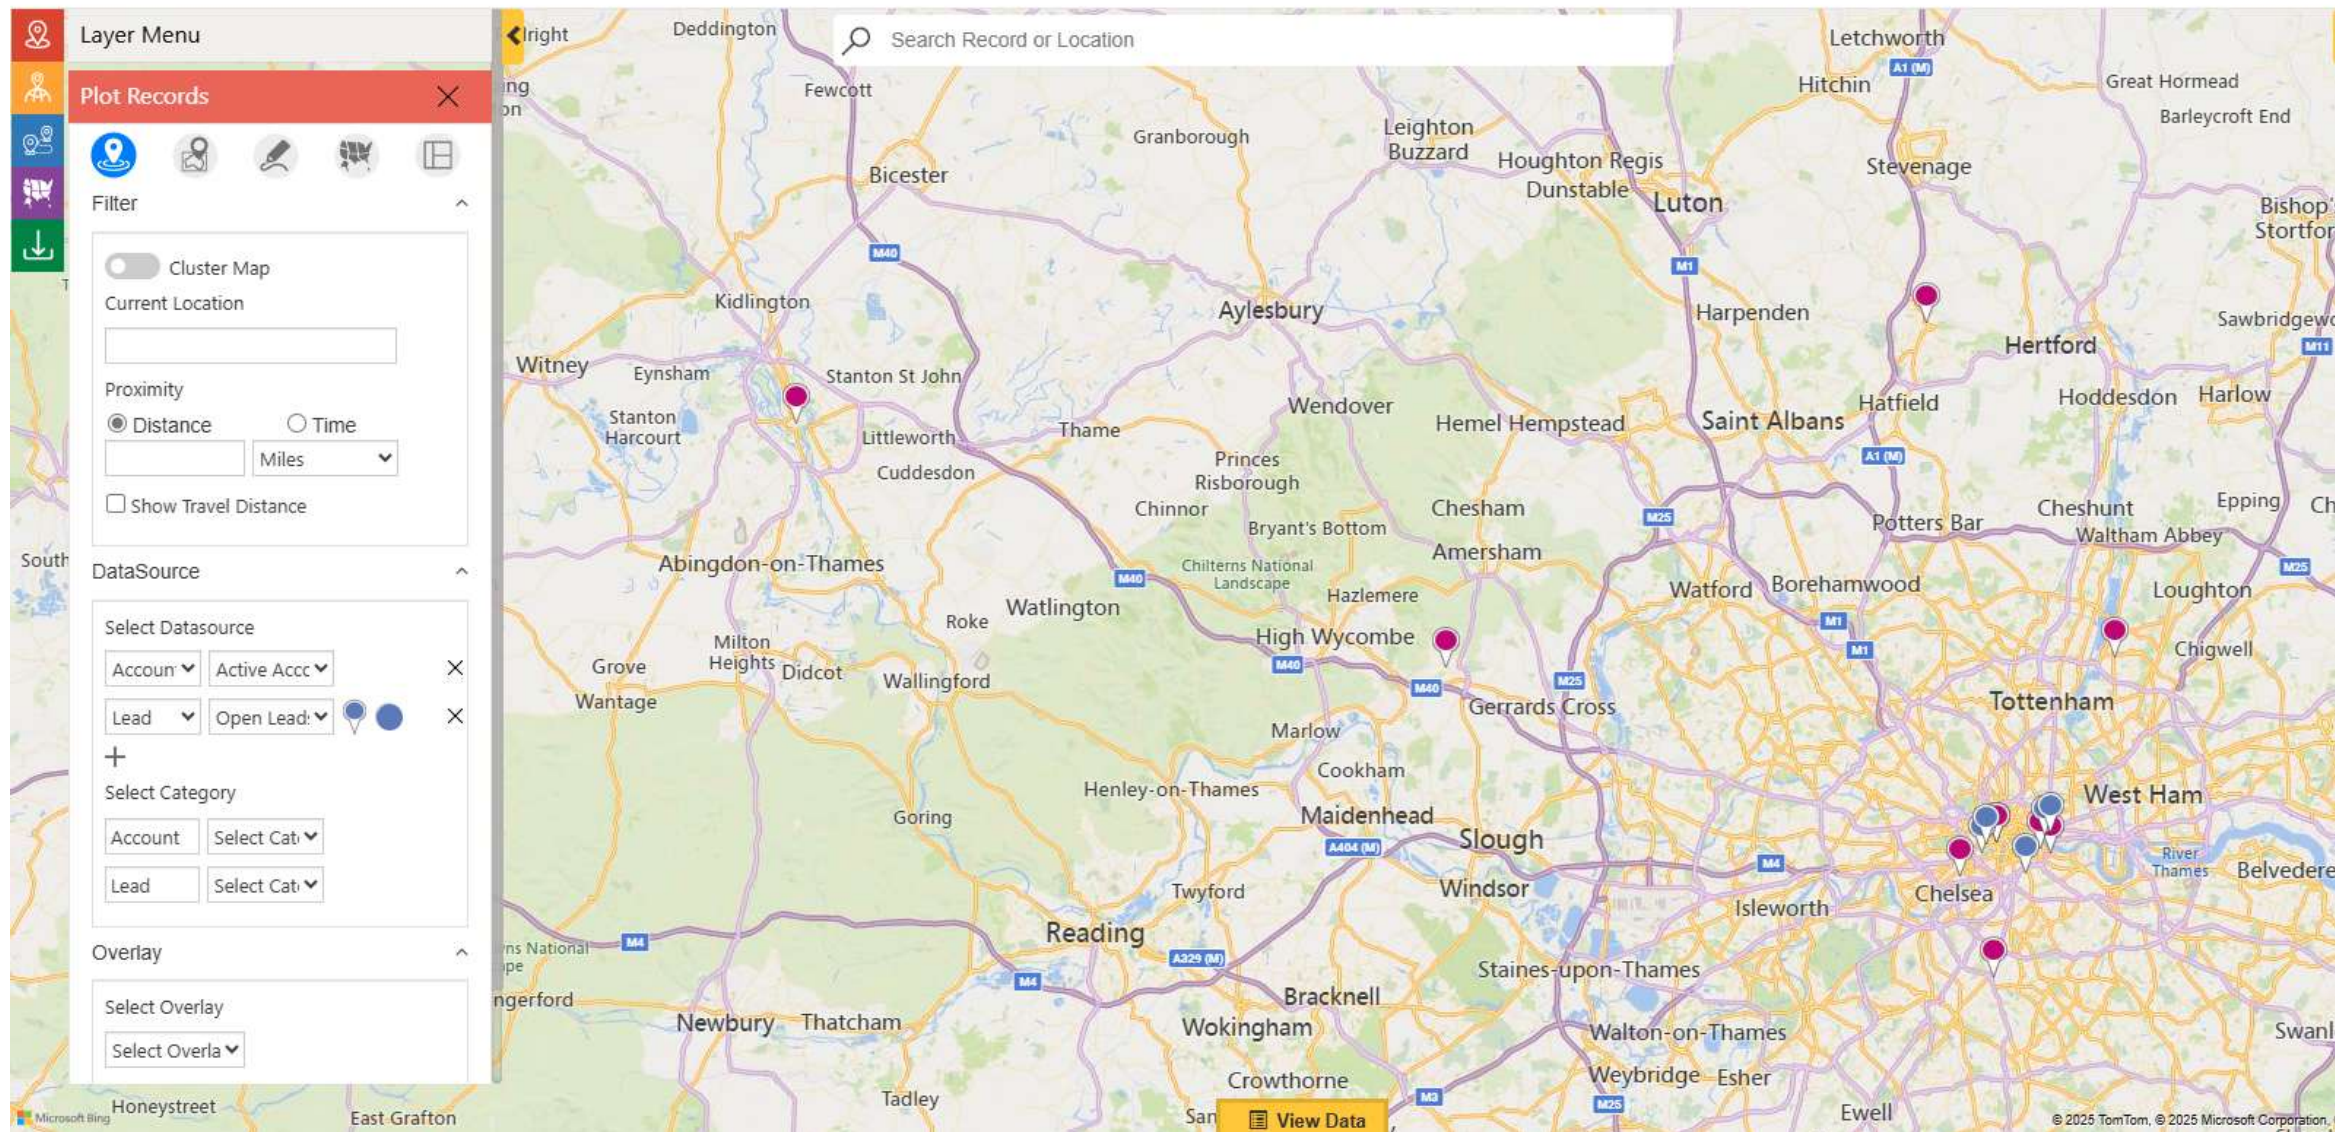

Use cases for maplytics.

- View accounts based on revenue
- Track assets in a map
- See engineers in radius of your customer
- Where in country are my open /leads/opportunities/quotes so I can look to close them.
- Plan optimal routes with standard map functionality (amenities etc)
- Save your most used routes to customers and see the mileage – used saved routes
- Visualise Territories in a map view.
- Visualise on a map all the customers I haven't visited in the last 3 months.
- Visualize top performing areas in a heat map

Data8

www.data-8.co.uk

Why use **data8**?

When data is everything the data 8 verifies the following...

- *Predictive Address - Allows a user to start typing from any point of their address. A list of suggested addresses is then generated, in real-time, for them to choose from.
- *Email Address validation - checking for typos, fuzzy logic and spelling mistakes in both the username and domain parts of the address.
- Phone Number - goes beyond checking the length of the number; it verifies whether it's callable & identifies information such as its type and network
- Bank Account Verification – When a customer enters their sort code and account number, we check if the details are correct, the account is direct debit capable, and CHAPs supported.

Why use **data8**?

- Telephone Preference Service - Allows you to check telephone numbers against the TPS register in real-time. Screen numbers before calling or on a scheduled basis. CTPS checks available in addition.
- Duplicare - Duplicare™ was designed to dedupe, merge, and standardise multiple records all at once.
- Data integrity - measure & monitor data quality over time, whilst creating specific data quality scores against fields important to you.
- Business Insights - can provide details such as full address, SIC code, company structure, turnover, number of employees and credit rating.
- Provenance - reduce your risk of costly legal fines, and become entirely GDPR compliant, with Data8's data audit trail solution

Data8 Demonstration

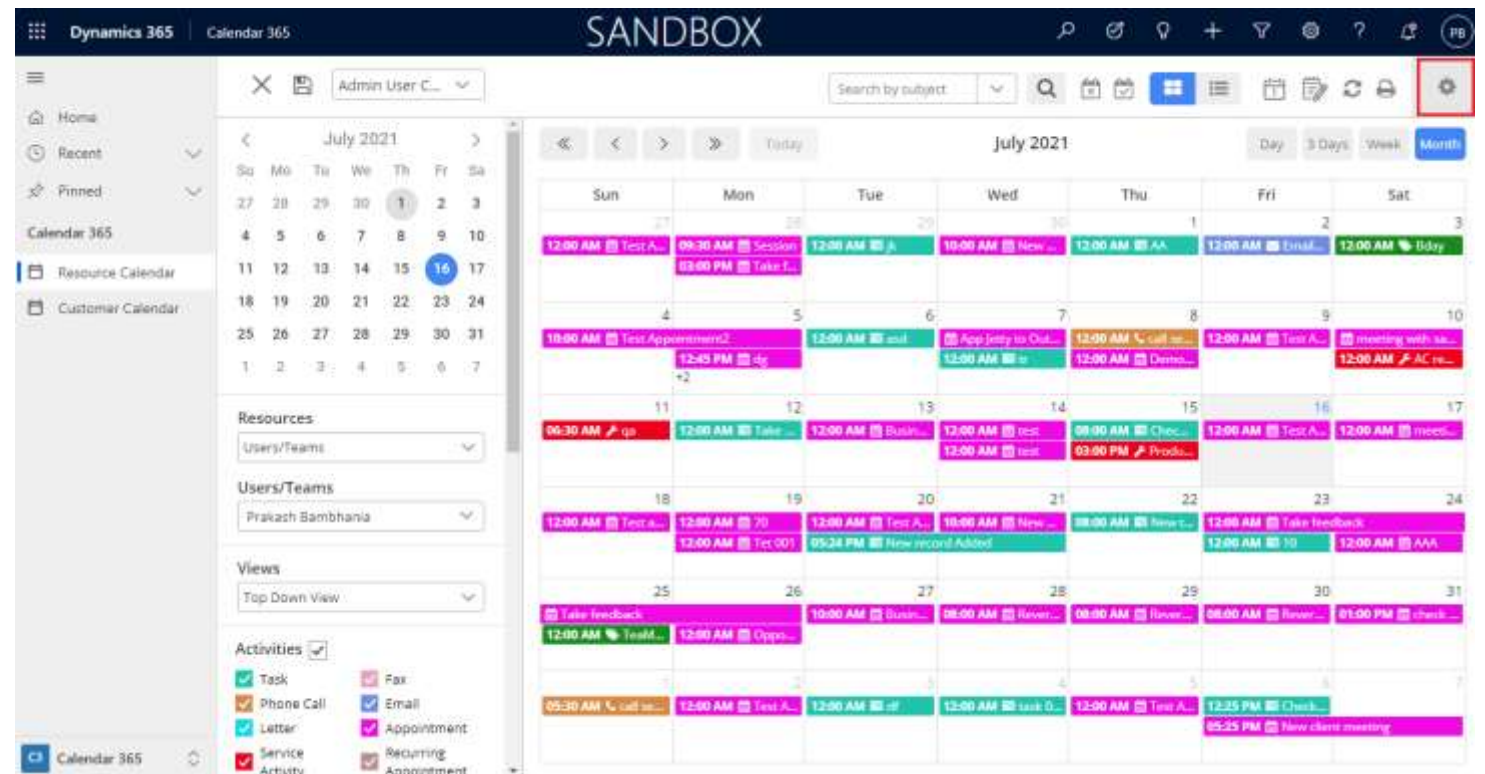

Other Notable Mentions

Calendar 365 For Dynamics CRM

- The ability to drag calendar entries within CRM.
- visualization of resources and their availability
- different types of views like Top Down, Gantt, Timeline, and Agenda views
- Supports Custom tables
- More information can be found at
- <https://www.appjetty.com/dynamics365-all-in-one-calendar.htm>

Other Notable Mentions

- [D365 Shrinky](#) - Synchronicity Technology Services – An alternative solution that reduces activity pointer table.
- [Activity Tools](#) – MSCRM Addons - Outlook-like interface within the Dynamics 365 platform
- Account Management Framework – Tecman – Centralise and Automate Customer Appointments, follow ups and discussion Points
- Non Conformance Framework – Tecman – Manage non conformance, preventative actions and CAPA actions from a Model Driven app and a Canvas app on a mobile Device.
