Q & A

Hi!
I'm Zak!

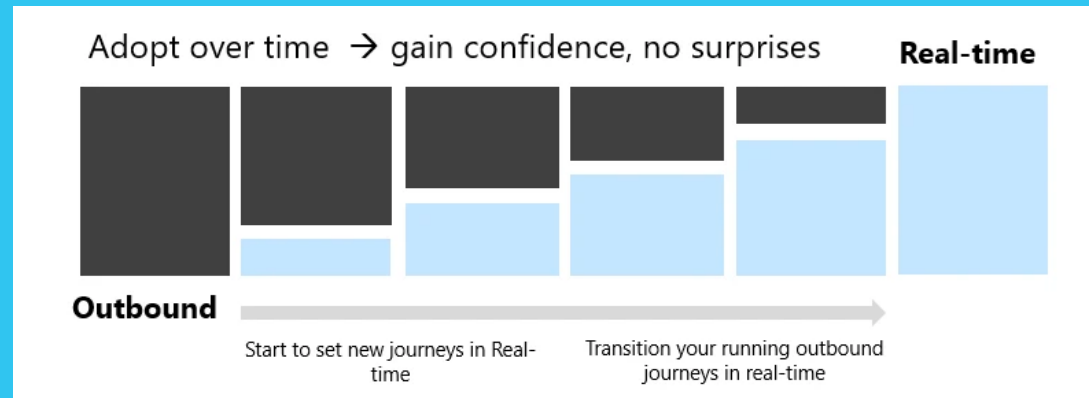

What we'll cover

1. Move from Outbound to Real-Time
2. Core Features (Segments/Emails/Journeys)
3. Form Capture
4. Personalisation
5. Triggers
6. Future Features

Moving over to Real-Time

- If you buy a licence today, you will not even see Outbound Marketing
- In September 2023, Marketing joined together with Customer Insights
- You get 2 Apps with the new licence, Journeys and Data
- Marketing used to be 1 Production Only, Customer Insights has scope for 4 Journeys and 4 Data
- Everything Outbound did and more

Segments

- Target Leads and Contacts in your CRM
- Use attribute data to filter your segments e.g. Contacts in Food Industry
- Use behavioural data from your journeys, emails and forms
- Add any custom table into your dataset configuration
- Preview and estimate your segment members
- Copy your segments
- (Preview) Add groups, **Example:** Let's say you want to create a query for leads with a company size of more than 10,000 employees whose parent accounts are in the Food industry, but not leads with a budget of less than £50,000.

Emails

- Easy to use drag and drop builder
- Personalization to dynamically populate information across any table in the system
- Links to documents and videos in your asset library via file download button
- Preview and test send before distributing your content
- Conditional content that would enable you to personalise imagery e.g. send from owners of records / sales team
- Brand Profiles that pre-fill important data per brand

Compliance

- GDPR is still a hot topic in 2024. Journeys has preview for 'one click unsubscribe' in line with Google & Yahoo's latest compliance policies
- You can capture consent across Contacts, Leads and Data Profiles
- You can create a Compliance Profile that outlines your company stance on consent.
- There are three different purposes you can define: Commercial Communication, Transactional Communication and Tracking Consent.
- Unsubscribes will tick the 'Do Not Allow Bulk Emails', 'Do Not Allow Emails' and 'Do Not Track' fields

Forms

- You can create and design brand-new forms and host them on your website and all form submissions are captured in CRM
- “I don’t want to redesign my forms”
- OK, you can now use 3rd Party Form Capture. Your form stays the same. Auto-generate JavaScript and place it into your website. Your Form will then capture submissions and store them in Dynamics with the only change you make being adding the script.

Triggers

- Capture important customer moments and interactions
- Any field on any table changes in CRM, you can build a trigger based on that if it is important to you.
- Examples: Product being purchased on an invoice, a survey being booked, a quote being won.
- Triggers are then used to kickstart the Journeys

Journeys

- Segment based journeys or trigger-based journeys (it's up to you)
- Send emails, texts and push notifications
- A/B Testing and channel optimisation
- Wait times, wait for triggers, send a series or branch based on attributes
- Create phone calls, tasks, opportunities or leads
- Activate a custom trigger from a journey
